

DataVault™ Email Archiving

Compliant Message Archiving Solutions

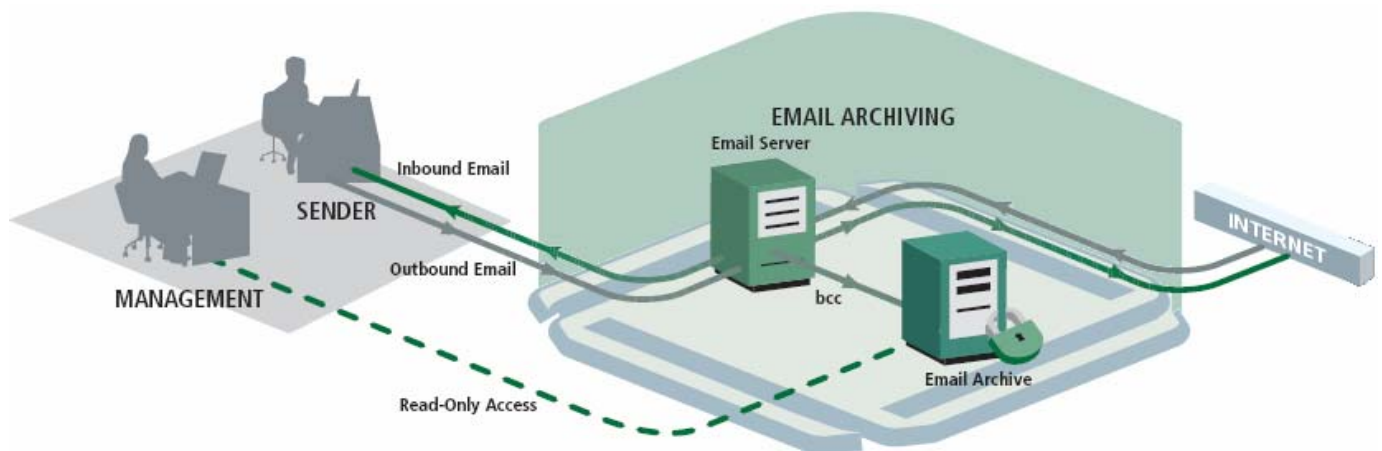

Service Overview

DataVault™ Email Archiving Service offers a complete message archiving and compliance solution that can protect your organization from regulatory risk and legal liabilities associated with electronic communications. The DataVault™ Email Archiving Service was designed to help you enforce a complete message archiving and compliance policy with minimal cost and impact to your organization. Said simply, The DataVault™ Service allows organizations to search for, access, and quickly retrieve any archived email record quickly and easily, while providing a secure audit trail for that record.

Service Highlights

Backup solutions alone cannot satisfy the regulatory, discovery, and retention needs for electronic records, which means an automated email archiving solution is necessary. DataVault™ is a hosted solution designed to process millions of messages and archive hundreds of gigabytes per day in a high availability and high performance fashion. As a result, the DataVault™ Email Archiving Service offers the most robust, comprehensive, and scalable enterprise archival solution available today.

DataVault™ dramatically reduces the ongoing cost of email storage and management, and ensures that valuable information can be retrieved quickly and efficiently. The mail system is configured to send a blind carbon copy (BCC) of all email for your domain to the DataVault™ in real time, automatically placing a copy into the archive. The DataVault™ Email Archiving Service eliminates the need to keep historical messages on your mail server and eliminates the need for users to keep extensive local email files.

Key Features & Benefits

While technologically sophisticated on the back-end, The DataVault™ Email Archiving Service offers customers an easy-to-implement and easy-to-use tool with robust search and discovery, supervision, and enforcement features.

- Easy Deployment – The DataVault™ Email Archiving Service can be implemented via MX record change.
- Automatic Archiving- All email is automatically saved in the archive.
- Remote Viewing & Management – 24/7/365 web portal access to manage retention policy and search for messages.
- Audit Trail – All message access is tracked and stored securely for access reporting.
- Easy to Understand Graphical Reporting – Generate reports to identify top usage, storage usage and more.
- Scalable, Reliable, State-Of-The- Art Network.
- Complete Privacy of Data.
