Delivering Extreme Value, Excellence & Peace of Mind 24x7

Intrusion Management Service

Firewall, IDS & IPS Monitoring & Management

Overview

Protecting your critical information assets does not stop once a security architecture has been implemented. In order to defend against unauthorized network intrusion, you must continuously monitor your security devices, servers, applications and other networked devices for signs of malicious activity and respond to them in a timely manner. Our Intrusion Management suite is a sophisticated yet flexible solution with dedicated, around-the-clock security expertise to sift through the volumes of log files and security alerts to identify the critical threats from the benign events and false-positives in real-time, 24X7.

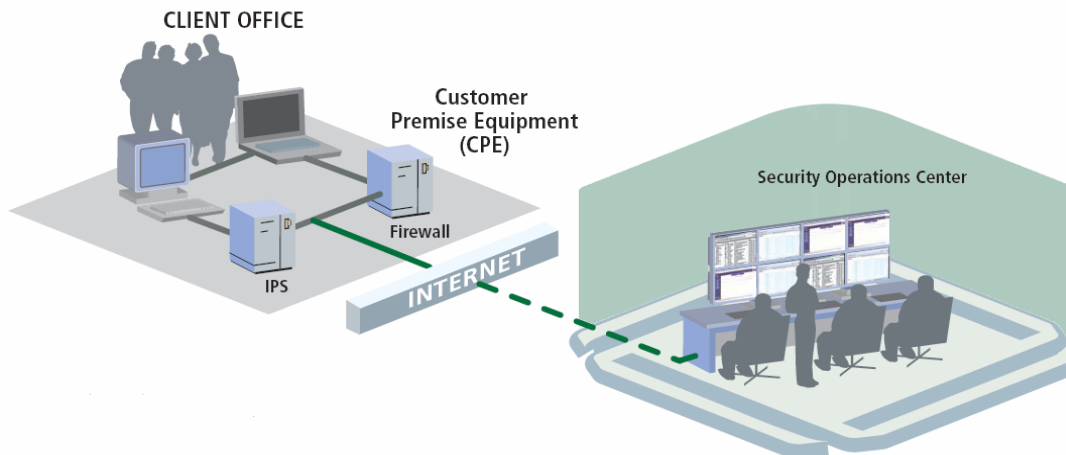

Service Highlights

Our Intrusion Management suite is a turnkey security solution that includes system set-up, configuration, and around-the-clock monitoring and administration of your firewall, IDS or IPS technologies by our team of expert security analysts. To be effective, security hardware and software require near-constant configuration maintenance, vulnerability updates, ongoing assessments, and log analysis reviews of all changes and network activity. Our security team will manage all of this for you.

Our Security Operations Center is designed to be the nucleus of all your information and Internet security operations, providing continuous prevention, protection, detection and response capabilities against threats, remotely exploitable vulnerabilities and real-time incidents on your networks. When combined with our incident response capabilities, your organization will have a proven and innovative layered security solution. Given our extensive security experience, intelligence, and vendor neutral support, we are in a unique position to deliver robust, customized management and monitoring solutions for your new or existing security technologies.

Key Features & Benefits

- Technology agnostic: We support the Top 10 security technologies
- 24/7 Monitoring: Live firewall, IDS and IPS monitoring and investigation by highly trained security experts
- Real Time Notification: Rapid notification of suspicious or malicious activity
- An interactive security web portal for viewing device status and analyst log commentary as well as communicating directly with the analysts
- A broad array of solutions available to match your needs exactly
- Internal and external threat monitoring and management
- Regulatory compliance guarantee
- Aggressive Service Level Agreements
