"Enhanced Professional Services" – Real world solutions, services and training

Security Program Design

Unauthorized access, fraud, eavesdropping, attacks, and threats to your information assets and network resources are increasingly serious concerns for today's customer-focused companies. As your business expands and access is required through intranets, extranets, the Internet, and mobile communications, your growing workforce and business relationships require faster and easier secure access to information. Your private and sensitive information is shared by greater numbers of people and your network security issues and risks are increasing. If you are one of the growing number of companies combining voice and data systems into one integrated system, your security needs are even more complex and critical. Security threats can come from external sources or even from within your own organization

SYSTMS of NEW YORK employs today's best-of-breed technologies and industry best practices to help our clients leverage and transform technology into a competitive advantage.

Our system integration services include:

- **Security Assessment** is a comprehensive, operational review or "snapshot" of the current state of your security posture. This effort will determine current strengths and weaknesses in your security practices and controls as they relate to appropriate security practices based on industry, international and national standards and guidelines.
- **Security Policy Development** designed to assist you in defining a network Security Policy that can be implemented in your systems and network security infrastructure to protect assets and intellectual property.
- **Security Architecture & Design** delivers the plans and blue print for a successful security infrastructure implementation.
- **Authentication Solutions Design & Implementation** go beyond simple passwords is becoming a necessity because of the risk associated with traditional authentication methods. This becomes an even greater concern as remote users, employees, clients, partners, or suppliers access your company IT resources.
- **Content Filtering** solutions provide added control points to enforce approved Internet Acceptable Use policy. In countless harassment lawsuits, Business have been told that they did not do enough to control the environment. Regardless of the policy employee will continue to be human and will regularly violate the rules.
- **Network Security** - Our engineers implement and support many of the premier security technologies on the market. Our security solutions include workstation and LAN security analysis and implementation, firewalls, Virtual Private Networks (VPNs), intrusion detection products, remote access, anti-virus, secure messaging and enhanced authentication.

SYSTMS-NY specializes in providing solutions for a variety of technology platforms. We employ today's best-of-breed technologies and industry best practices to help our clients leverage and transform technology into a competitive advantage
